

Aquacontrol[®]

... keeps water well under control

Let the waters flow – where they should!

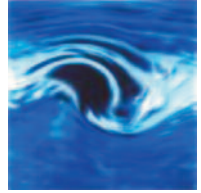

A systematic monitoring of water consumption.

What is *Aquacontrol*?

Aquacontrol is a labour-saving device for all those concerned with house maintenance when it comes to water consumption. It is a cost-efficient, computer-aided service that professionally monitors and analyses water consumption. Thus, Aquacontrol not only reduces your workload, it also cuts operating costs!

How does *data collection* work?

Consumption data is collected automatically using a water flow meter with an impulse sensor, whose recording intervals (days, hours, minutes, etc.) can be set as required. The data is at your immediate disposal, by free home delivery, so there's no need for you to bother about it, or to go climbing about in your cellar or service shaft checking meters.

What can *Aquacontrol* do?

Aquacontrol is a full service programme that makes hidden conduit damage visible. This especially applies to the early detection of leakage, damage and gradual wastage, which is easily found with the help of Aquacontrol. Thus, any necessary counter-measures can be taken immediately, which means that any statutory requirements can be met without delay.

The major benefits of Aquacontrol!

- It indicates excess water consumption and identifies its causes
- It makes gradual wastage visible
- Early detection of leakage and other damage
- No more laborious checking of meters in cellars or service shafts
- Efficient control of water consumption
- It provides legally valid proof for insurances and competent authorities
- It serves as the basis for recovery of water rates (sewage disposal charges)
- It minimises water costs
- It provides long-term protection for your property
- Water monitoring in conformance with the law
- No access need be granted to additional service staff
- Professional service at low cost
- Responsible use of water

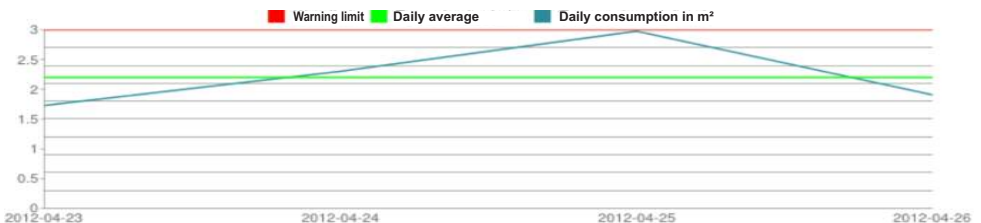

Data analysis and documentation with Aquareport!

Your Aquacontrol report on water consumption:
Professional data collection, clear recording, perfect clarity

Overview of week 17/2012

Day	Date	Daily consumption	Daily average	Meter standstill	Excess
Monday	2012-04-23	1.728 m ³	2.2 m ³	400 min	0 x
Tuesday	2012-04-24	2.302 m ³	2.2 m ³	330 min	0 x
Wednesday	2012-04-25	2.976 m ³	2.2 m ³	250 min	0 x
Thursday	2012-04-26	1.906 m ³	2.2 m ³	310 min	0 x
